FOREWORD

Ranchers, farmers, and businessmen need reliable and accurate statistical data as a basis for planning their operations. The information contained in this bulletin is published to assist people in the livestock industry in planning and making operational decisions.

Contained in this bulletin is a compilation of official estimates of livestock inventory numbers, production, income and related statistical information for cattle and calves, sheep and lambs, and hogs. The data represented are for the years 1973 through 1982. The 1973 through 1981 figures are revised estimates while the 1982 figures are generally preliminary. The data in this bulletin supercedes any previous issues.

The preparation and release of estimates is a primary function of the California Crop and Livestock Reporting Service. This agency is the California office of the Statistical Reporting Service of the United States Department of Agriculture. Under a cooperative agreement, this agency also serves as the Bureau of Agricultural Statistics of the California Department of Food and Agriculture. As part of a federal agency, its functions are correlated with the national programs to provide uniform statistics of agriculture for the nation. As a state service, this office develops additional statistical information to fulfill local needs, generally in the form of county estimates.

The voluntary cooperation of ranchers, farmers, and agri-businessmen is the primary data source of the California Crop and Livestock Reporting Service. We appreciate the faithful service and cooperation and extend our sincere thanks. The statisticians responsible for much of the data published in this bulletin are Neil Gum and Richard Petzoldt.

7. Southeastern Interior - Alfalfa Seed, Cotton, Hay, Small Grains, Sugar Beets.

Notes

Area boundaries are approximate only. Field crops are also raised in several small areas not included within these boundaries.

FOREWORD

This bulletin brings together the basic statistical record for California field crops: grains, hay, cotton, sugar beets and others in this class. Current reports for each of the series are available as separate releases.

The California Crop and Livestock Reporting Service is the California unit of the Statistical Reporting Service, United States Department of Agriculture and, under a cooperative agreement, serves as the Bureau of Agricultural Statistics of the California Department of Food and Agriculture. All services are correlated with the national program to provide uniform statistical records of the Nation's agriculture. As part of the California Department of Food and Agriculture, this office develops additional data and necessary statistical records pertaining to California agriculture. This cooperative arrangement eliminates duplication of effort and makes possible a more thorough coverage of this field of work.

Acknowledgement is due a large number of people and concerns to whom we are indebted for cooperation in developing these agricultural records. Special credit in this respect is due the many loyal, voluntary crop reporters from all parts of the State, who generously give their time in reporting to the Service. Recognition is also due our telephone and field enumerators whose continued hard work and broad knowledge of the State's agriculture are invaluable. Statisticians presently responsible for much of the data in this bulletin are Joe Seibert, Vic Tolomeo, Charlene Luther, Jerry Ramirez and Ann Roberts, statistical assistant.

CALIFORNIA BARLEY ACREAGE BY VARIETY -- 1983 AND 1982 REVISED

Barley acreage planted in California for 1983 harvest is estimated at 560,000 acres, down substantially from the 700,000 acres seeded for 1982. Malting varieties were planted on 34,900 acres this year, down only slightly from the 35,400 acres seeded last year. C.M. 72 continued to be the leading variety with 19 percent of the acreage, a decline from the 24 percent it held in 1982. Prato moved into second place with 17 percent of the total compared to 8 percent a year earlier. U.C. 566 was third with 9 percent, up from 1 percent last year. Arivat was fourth with 8 percent this year, dropping from 10 percent in 1982.

CALIFORNIA VEGETABLE CROPS

This bulletin, prepared annually, contains the most recent estimates of acreage, production, and value for principal commercial vegetables, melons, and strawberries grown in California for the period 1981-82. Harvested acreage by county is included. Also included are tables showing 1981-82 monthly prices and sales for a number of the fresh market vegetable crops.

The vegetable and melon estimates encompass commercial production only and exclude home and farm gardens. Vegetables grown for seed are also excluded. Potato and sweetpotato estimates are shown but are excluded from the summary of all vegetable crops.

Prices for processing crops and processed segments of dual utilization crops are based upon equivalent returns at the processing plant door. For fresh market sales, the price is on a packed and loaded basis, F.O.B. shipping point.

Data presented in this publication are made possible by the cooperation of growers, processors, shippers, and other representatives of the California vegetable industry. Their cooperation is appreciated.

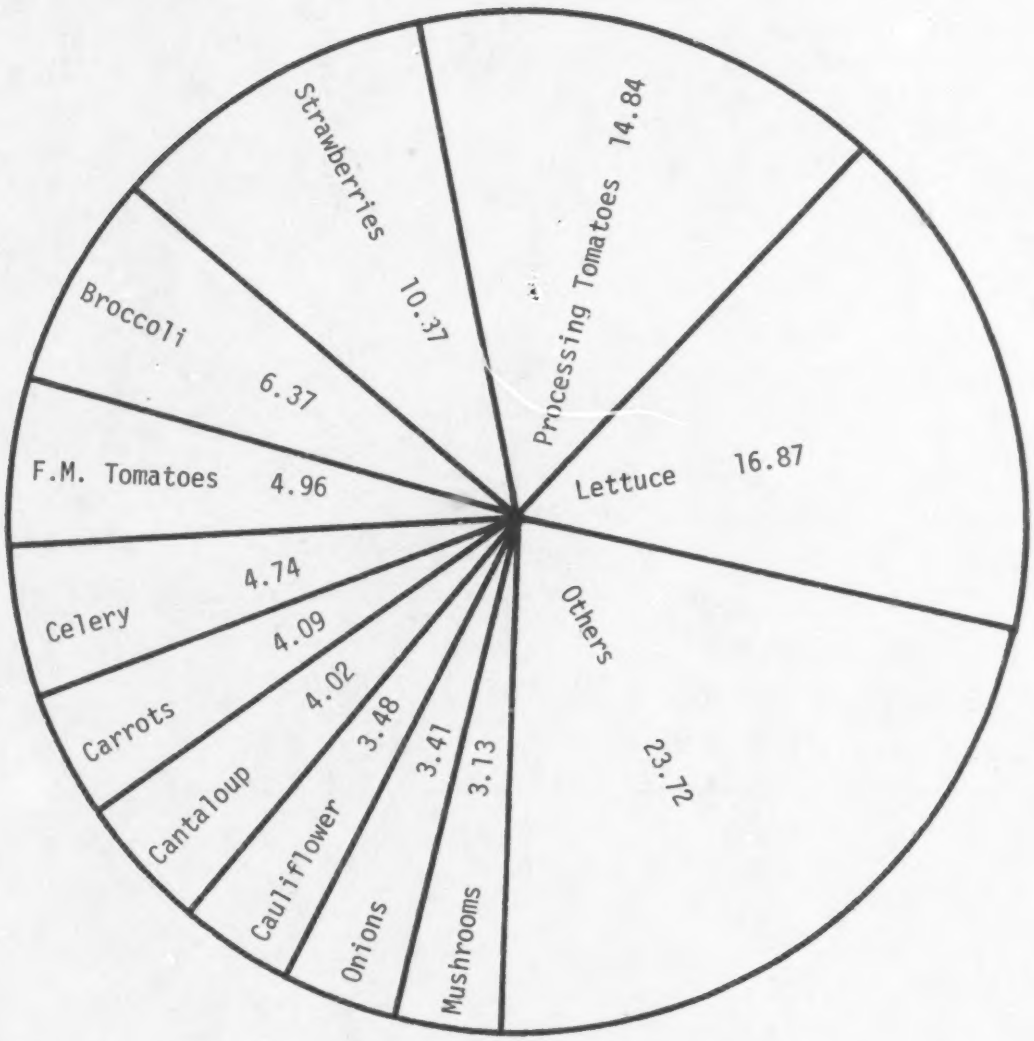
IMPORTANCE OF CALIFORNIA'S LEADING VEGETABLE CROPS - 1982*



*Based on value of production, excludes potatoes and sweetpotatoes

1982 SUMMARY

California produced 13.8 million tons of vegetables from 940,000 acres during 1982. Value of production was $2.84 billion, compared to $2.56 billion in 1981.

Total production was up 15 percent from 1981's harvest of 12.0 million tons. Most of the increase was in processing tomatoes with substantial increases also in production of dry market onions, carrots, broccoli, celery, and strawberries.

Value for about one half of the crops estimated increased from 1981 with largest increases in processing tomatoes, strawberries, broccoli, lettuce, and carrots. The increased values were partially offset by decreases for market tomatoes, cantaloup, and chili peppers for drying.

California again led the nation in vegetable production. The state produced 51.6 percent of the principal fresh market crops and 55.0 percent of the seven major processing crops.

1/ For processing crops and the processed segment of dual utilization crops, price is based on equivalent returns at the processing plant door. For fresh market crops, price is on a packed and loaded basis, f.o.b. shipping point.

2/ Production includes some quantities not marketed because of shrinkage and loss. Shrinkage and loss excluded in computing value. Onion -- 1981 -- 221,000 cwt.; 1982 -- 220,000 cwt.

3/ Miscellaneous vegetables cover a number of other vegetable crops not published separately. Included in this group are green onions, Oriental vegetables, parsley, pumpkins, radishes, squash, etc. Beginning 1980 includes commodities previously estimated separately.

4/ Potatoes and sweetpotatoes are not included. These crops are included in field crop totals.
